Title	PARKIQ – Smart Parking Management and Reservation System
App Name	PARKIQ
Problem Statement	Finding a safe and available parking space is often difficult and time-consuming. Drivers may waste time searching for parking and face uncertainty about slot availability, pricing, and security. PARKIQ solves this problem by helping users find nearby parking spaces, check real-time availability, select slots, and reserve parking easily.
Abstract	PARKIQ is a smart parking application designed to simplify the process of finding and booking parking spaces. Users can search nearby parking locations, view available slots, select their preferred date and time, check parking details and safety information, and make reservations. The application also supports features such as AI-based parking recommendations, active parking tracking, Find My Parked Vehicle, saved parking locations, and a Parking Owner section for listing parking spaces.
Target Users	Car owners, bike owners, daily commuters, office employees, shoppers, residents, and parking space owners.
Planned Core Features	1. Smart Parking Search & Nearby Parking 2. Real-Time Parking Slot Availability & Booking 3. AI Pick for You – Smart Parking Recommendation 4. Parking Safety Score & Find My Parked Vehicle 5. Parking Owner – List and Manage Parking Spaces
App Icon	Use your PARKIQ logo/icon – preferably a Parking "P" symbol combined with a location pin, car, or smart/AI element.

Evaluation – UI Design & Visual Appeal

The UI uses a consistent dark theme with bright green and pink accent colours, rounded cards, clear typography, simple icons, and bottom navigation. The Home, Explore, Saved, Bookings, and Profile screens follow the same visual language, making the application easy to understand and navigate.

Title	PARKIQ – Smart Parking Management and Reservation System
App Name	PARKIQ
Aim	To develop a smart Android-based parking application that helps users find, compare, save, and reserve nearby parking spaces efficiently and securely.
Objectives	Provide a user-friendly parking search and reservation platform. Show nearby parking spaces with availability, distance, rating, and price. Allow users to select vehicle type and preferred parking location. Provide AI-based parking recommendations. Allow users to save favourite parking spaces. Manage active and past bookings with parking details. Help users locate their parked vehicle. Maintain a user profile and parking-owner access.
Technologies Used	Platform: Android Studio Language: Kotlin UI: XML / Android Views Database: Firebase Maps/Location: Location services / map integration AI: AI-based parking recommendation
Main Features	Smart Parking Search – Search nearby parking by location or landmark. Vehicle Selection – Choose Car or Bike before searching. AI Pick for You – Recommend parking based on distance, price, rating, and availability. Explore Parking – Browse popular areas and parking locations. Saved Parking – Save favourite parking spaces for quick access. Bookings – View active and past parking reservations. Find My Vehicle – Access vehicle-location assistance from active booking. Profile – Manage account, rewards, settings, and parking-owner options.
Working Flow	Home → Select Vehicle → Search Location → Explore Parking → View Parking Details → Select Slot → Reserve Parking → Active Booking → Find My Vehicle → Past Bookings / Saved Parking → Profile
Result	The PARKIQ application provides an interactive and visually consistent parking experience where users can discover nearby spaces, receive AI-based suggestions, save favourite locations, and manage their reservations from one application.
Conclusion	PARKIQ combines Android development, location-based parking discovery, reservation management, and AI-assisted recommendations to create a smart and convenient parking platform. Its dark-themed interface, clear navigation, and focused screens improve usability and make parking management simpler for users.

Mobile Application Development – CA1: Review 3

Development & Responsiveness Review

Milestone: Core build progress and responsive layout implementation

Section	Details
Group Number	10
Team Members	1. Md Atiullah Ansari – 25MCAR0108 2. Aniwesh Aman – 25MCAR0304 3. Hardik Patel – 25MCAR0094
Title	Smart Parking Management System
App Name	ParkIQ
Features Implemented	Home screen; live location search with area suggestions; Use Current Location; parking area selection; parking listing; parking details; booking; payment; saved/favourites; My Tickets; Profile; Google Maps/vehicle location support.
Tech Stack Used	Android Studio, Kotlin, Jetpack Compose, Google Maps, Android Location Services
Devices / Screen Sizes Tested	Android Studio emulator and Android mobile device; tested on different screen sizes using responsive Jetpack Compose layouts.
Responsive Design Approach	Responsive Jetpack Compose layouts using fillMaxWidth, fillMaxSize, Row, Column, LazyColumn and horizontal scrolling. Cards and controls use flexible sizing and padding so content adapts to different screen widths.
Known Issues / Bugs	Location results and parking availability depend on available location data. Minor UI alignment and responsiveness adjustments may still be required on some screen sizes.
Add-ons as per Remarks	Search/location UI was improved, parking results were made selectable, BTM Layout and other areas were connected to parking results, and responsive scrolling/layout adjustments were implemented.

Evaluation – Responsiveness & Interactivity:

UX, Navigation & Usability Testing

Milestone: User flow, interactivity, and usability feedback

Section	Details
Group Number	10
Team Members	1. Md Atiullah Ansari – 25MCAR0108 2. Aniwesh Aman – 25MCAR0304 3. Hardik Patel – 25MCAR0094
Title	Smart Parking Management System
App Name	ParkIQ
Navigation Flow Summary	Home → Search/Location → Parking near selected location → Parking details → Booking → Payment → My Tickets. Bottom navigation provides Home, My Tickets and Profile access.
Interactive Components Used	Search field, location suggestions, current-location button, buttons, clickable cards, horizontal vehicle-type selection, parking lists, booking forms, payment flow, dialogs/feedback messages, bottom navigation and profile controls.
Usability Testing Method	The application was tested by running the Android build on an emulator and a physical Android device. Main user flows were checked by entering locations, selecting parking areas, opening parking details and moving through the booking flow.
Usability Feedback Received	Feedback focused on making location search easier, keeping search results visible, improving button/card spacing, and making navigation clearer. The layout and interaction flow were adjusted accordingly.
Navigation Improvements Planned	Improve location autocomplete coverage, refine responsive spacing on smaller screens, improve empty-state messages, and complete final navigation and deployment checks before submission.
Add-ons as per Remarks	Search and location selection were refined, parking-area navigation was improved, horizontal vehicle selection was added, and UI spacing/responsiveness was adjusted based on testing.

Final Presentation & Deployment Review

Milestone: Completed app, deployment, and final demo

Section	Details
Group Number	10
Team Members	1. Md Atiullah Ansari – 25MCAR0108 2. Aniwesh Aman – 25MCAR0304 3. Hardik Patel – 25MCAR0094
Title	Smart Parking Management System
App Name	ParkIQ
Deployment Details	Android APK demo build for installation and demonstration on an Android device. Store publication is not required for the CA1 review.
Final Feature Summary	ParkIQ provides location-based parking search, live location suggestions, current-location support, parking-area selection, parking listings, parking details, booking and payment flow, saved/favourites, My Tickets, Profile, and map/vehicle-location functionality.
Demo Notes	Demonstrate launching ParkIQ, searching for a location such as BTM Layout, selecting an area, viewing nearby parking, opening a parking place, completing a booking/payment flow, checking My Tickets, and showing Profile/Saved functionality.
Project Report Submitted	To be attached/submitted with the final project documentation.
App Icon	
Add-ons as per Remarks	Final UI refinements, location search improvements, parking-area navigation, responsive layout corrections and testing were incorporated into the build.

Final Evaluation – CA1 Rubric Total 15 Marks
